EXPERIENCE

Quality Backend Engineer Intern

May 2026 – Present

Siemens Energy

Orlando, FL

- Architected a Quality Resource Scheduler ecosystem using Power Apps, Power Automate, and SharePoint lists, featuring a dual-interface Admin and Time-Off App with dedicated employee and administrative portals.
- Engineered Power Apps formula logic to drive dynamic application visuals and calculate real-time scheduling conflicts, including a calculation engine processing over 12 distinct types of absence and Rest and Recovery (R&R) requests with time-sensitive scoring.
- Designed Power Automate workflows to dispatch real-time notifications regarding request statuses and established a backend audit log for historical tracking and compliance.
- Connected all SharePoint list data sources into a unified semantic model in Power BI, powering a dedicated admin reporting suite and a separate employee-facing report with operational scheduling metrics and analytical visuals.
- Engineered end-to-end ETL connections from Proceedix into Azure Workspaces and Azure Dataflows, performing Power Query transformations to build a production-ready data foundation.
- Built the full dimensional semantic model in Power BI using DAX and DAX Studio, consolidating a 30-plus-table schema processing over one million rows with fact tables for checklists and snags, supporting dimensions for projects, assets, dates, statuses, severity, and inspection types, and reusable KPIs for closure rates, snag age, severity distribution, and MQI/PQI scoring logic.
- Designed Power BI reports covering executive overviews, project status, snag drilldown and analytics, inspection trends, and MQI/PQI scoring, replacing fragmented manual reporting with a governed analytics experience for management, field technicians, and quality stakeholders; developed and embedded parameterized paginated reports in Power BI Report Builder producing PDF and Excel outputs with automatic pagination and severity composition charts.
- Deployed a unified Power BI app consolidating all reports into a single governed experience and configured Power Automate workflows to query the semantic model on a schedule and automatically distribute email reports to relevant stakeholders.

Fulfillment Team Lead

February 2024 – May 2026

Target

Winter Garden, FL

- Directed high-volume fulfillment operations managing an annual throughput of over 2.5 million units across Order Pick Up (OPU) and Ship from Store (SFS) departments.
- Reduced lost sales by over \$519,000 in one year by implementing rigorous inventory accuracy protocols and cutting Item Not Found (INF) rates by 30.7%.
- Optimized OPU logistical efficiency by increasing the Ready to Store (RTS) rate from 94.8% to 97.9%; maintained a 99% Ship on Time (SOT) rate while managing a 9.5% year-over-year increase in SFS volume.
- Built a leadership pipeline by identifying and training 4 pace setters to manage daily floor operations, directly resulting in the promotion of one mentee to a Peer Team Lead role; managed teams of up to 50 team members.

Fulfillment Expert

August 2022 – February 2024

Target

Winter Garden, FL

- Promoted to Team Lead after 8 months by demonstrating consistent operational excellence and high pick-productivity as a pace setter.

Youth Sports Referee

March 2021 – January 2023

YMCA of Central Florida

Winter Garden, FL

- Officiated youth sports events, enforcing rules and maintaining a safe, fair playing environment for participants.

PROJECTS

AI-Augmented Retail Operations and Sentiment Pipeline

Independent Project

- Engineered an end-to-end ETL pipeline using Apache Airflow, Docker, and PostgreSQL (Star Schema) to ingest 5,000+ synthetic retail order and return records.
- Built a custom Airflow Python operator connecting to a local Llama 3 instance via REST API, automating zero-shot text classification and sentiment extraction on unstructured customer complaints.
- Modeled a denormalized data layer and authored an interactive Tableau dashboard featuring drill-down filters, geographic heat maps, and financial impact metrics by root cause.

TaskFlow: Full-Stack Web Application <https://taskflow-joseph.onrender.com>

Independent Project

- Engineered a production-ready full-stack task management application using vanilla JavaScript, HTML5, and CSS3 on the frontend with Node.js, Express.js, and PostgreSQL on the backend.

- Implemented secure user authentication with bcrypt password hashing, parameterized SQL queries for injection prevention, and session-based API route protection.
- Designed a RESTful API supporting full CRUD operations with real-time database synchronization, intelligent priority-based task sorting, and timezone-aware date handling.

AI-Powered File Inventory and Summarization Tool

Independent Project

- Engineered a custom AI utility to systematically ingest, process, and search through directories of local text files.
- Implemented local LLM integrations to automatically parse unstructured text documents, generate concise analytical summaries of file contents, and enable intelligent context-aware semantic querying across the file inventory.

Algorithms for Machine Learning (AI)

UCF Coursework

- Developed and implemented machine learning models using supervised and unsupervised learning techniques, including classification, regression, and neural networks.
- Optimized model performance through gradient descent and rigorous evaluation metrics; applied algorithmic analysis to large datasets to identify patterns and support data-driven decision-making.

SKILLS

BI & Analytics: Power BI, Power Query, DAX, DAX Studio, Power BI Report Builder, Paginated Reports (RDL), Dimensional Modeling, ETL Processes, KPI Development, Tableau, SQL, R, Apache Airflow

Cloud & Platforms: Azure Workspaces, Azure Dataflows, Power BI Service, PostgreSQL (Neon), Docker, SharePoint, Power Apps, Power Automate, Proceedix

Programming Languages: Python, Java, JavaScript, C

Frameworks & Tools: Node.js, Express.js, Git, VS Code, MS Office Suite, LLM/AI Tools

Business & Operations: Project Management, Cross-Functional Communication, KPI Optimization, Financial Modeling, Personnel Mentoring

EDUCATION

University of Central Florida

Bachelor of Science, Computer Science.

Orlando, FL

Expected Spring 2027

Relevant Coursework: Systems Software (C, Linux, Git), Data Structures and Algorithms, Object-Oriented Programming, Algorithms for Machine Learning, Robot Vision, Statistics III
